AD-VAI Collab 2016-293	A Pilot Study of Plasma Biomarkers for the Progression of Alzheimer's Disease	Investigational	Thoits, Timothy	Brandon James Brandon.James@spectrumhealth.org 616.486.2058

The purpose of this prospective case-controlled trial is to compare plasma RNA sequences, proteins and metabolites of patients with a probable diagnosis of Alzheimer's Disease (AD) who are between 75 and 85 years of age. The study involves a one-time blood collection with the intended purpose of generating preliminary data toward the development of a biomarker profile associated with the AD patient population.
