Double Room Patient Placement Guidelines – 6.24.2021 1500

Spectrum Health contact: Jessica Pratt

Document reviewed: 6.24.2021

The below guidelines are intended to guide clinicians with the use of double room as it relates to COVID-19, there are additional factors that may need to be considered when determining appropriateness for patient placement in a double room (i.e., isolation status; safety attendant at bedside; violent behaviors, anticipated extended length of stay, etc.)

1. **COVID NEGATIVE** this encounter OR Vaccinated** > 14 days ago
   *Include test results up to 5 days prior to admission.
   **Vaccinated = single dose for J&J or both doses for Moderna and Pfizer

2. Is the patient admitted with a Respiratory Diagnosis, Respiratory problem, or Respiratory Symptoms? (including but not limited to Pneumonia, Acute Respiratory Failure, Asthma or COPD Exacerbation)

3. Is the patient Immunocompromised? (as defined in the Severe Immunosuppressed Definitions document)

4. Does that patient require CPAP or BiPAP (including night use for OSA), nebulizer treatments, High Flow Nasal Cannula or have a Tracheostomy?

5. Does the patient have a history of COVID-19 within past 30 days (prior encounter/outpatient testing) OR Was the patient admitted with COVID-19 this encounter?

   - Yes
   - No

   - Yes
     - Patient requires a PRIVATE Room.
   - No
     - Yes
     - Patient may be placed in a double room with another patient who meets the same criteria
     - No
