<tr>
<td>Direct patient care* with suspected and confirmed COVID-19 patients</td>
<td><strong>Required hospital and ambulatory settings</strong>: N-95 respirator with face shield or goggles or PAPR with standard isolation mask, gown and gloves.</td>
</tr>
</tbody>
</table>
| All patient facing team members during all patient care encounters. | **Required**: Standard isolation mask and eye protection for all patient encounters.  
**Required for AGPs**: N-95 respirator with eye protection or PAPR with standard isolation mask |
| All hospital and ambulatory settings (including: hallways, common areas, and clinical spaces) | **Required**: Standard isolation mask.  
**Required for patients and visitors**: Spectrum Health issued standard isolation mask. |
| All other Spectrum Health settings (warehouse, business offices, Priority Health, etc.) | **Required**: Face mask in public areas, conference rooms and shared workspaces including cubicles (homemade, standard isolation mask, or PPE from home are acceptable). |
| Dedicated COVID-19 testing centers and drive thru locations | **Required**: N-95 respirator/PAPR**, face shield or goggles, gown, and gloves |

*Based on updated MIOSHA rules and CDC recommendations, all team members caring for COVID-19 positive patients or in prolonged close contact with suspected cases of COVID-19 are now **required** to wear an N95 respirator or PAPR with standard isolation mask along with other COVID-19 related PPE. Prolonged close contact is defined as within 6 feet for 15 minutes or more. If fit testing has not been completed, team members may use a **universal 3M 9205+ N95** with a proper seal check as a safe option until a fit test can be completed. If you cannot get a proper seal utilizing the seal check method, use a PAPR with standard isolation mask where available.  
**Nares swabbing for asymptomatic screening purposes in both hospital and ambulatory spaces only require a standard isolation mask.**

AGP: aerosol generating procedure
