

Standard Isolation Mask Guidelines 11.25.2020 0940

Spectrum Health Contact: Jen Grile *Highlight denotes new content

Document Reviewed: 11.25.2020

All team members in hospital and clinic settings wear masks while at work. Masks will be distributed at point of entrance. Masks are also available on inpatient units. Ambulatory sites will have a point person for distribution.

Use the following guidelines for wearing a standard isolation mask:

- The mask should be worn continuously and only changed if saturated or contaminated.
- The mask can be used for multiple patient encounters.
- Do not touch the outside of your mask or pull your mask up and down over your chin.
- If your mask is removed, perform hand hygiene and place your mask in a safe storage area (example: paper bag, hooks, or paper box) labeled with your name, and date. (Multiple paper bags can be used throughout the day to ensure proper infection prevention.)
- The mask must be worn covering the mouth and nose, and secured as intended by the manufacturer's instructions for use.
- Perform hand hygiene before and after donning and doffing mask.
- **Discard mask at the end of your shift.**
- Take a new mask from a masking station on the way out of the facility to wear back into the facility for your next scheduled shift.
- **The mask must be worn with a PAPR due to concerns for transmission of COVID-19 by team members who may be asymptomatic.**

Other Mask Guidelines:

- **Eyeglasses fog prevention tips:** 1. Ensure top of the mask is tightly fitted against your nose and cheeks 2. Fold top ½ inch of the mask toward the inside to catch air, before donning mask, wash lenses with soapy water, shake off excess and air dry, 3. Use an anti-fog spray.
- **Non-medical masks:** Non-medical masks are approved for non-clinical settings (warehouse, business offices, Priority Health) See "PPE from home" document [here](#)
- **Masks from home:** PPE from home that meets or exceeds isolation guidelines is acceptable (per [PPE from Home](#) document)
- **Wearing masks over masks:** We do not recommend wearing a standard isolation mask over an N-95 mask. This practice would decrease our supply of PPE necessary to care for our patients.

Universal masking requirements for patients and visitors:

- **Patients** older than five years of age should keep their Spectrum Health provided mask on their face, covering their mouth and nose, all at times in Spectrum Health facilities. Exceptions would include: when eating or drinking; having a test, procedure or treatment which necessitates mask removal; and sleeping. Patients in private or semi-private rooms may remove their mask when sleeping and/or alone in their room, with no Spectrum Health team members present and the door closed.
- **Visitors** older than five years of age must keep their mask on at all times, except when eating or drinking.
