Scheduling Pre-Procedure Patients for COVID Testing

All pre-procedure COVID-19 specimens should be collected at least 48 hours prior to scheduled procedure. Current COVID-19 turnaround time for pre-procedure collections is dependent on current lab volume.

Calling COVID-19 Positive Results for Pre-Procedure Patients

Due to system limitations, the Laboratory Call Center is unable to support calling COVID-19 positive results for pre-procedure patients. The ordering provider will be responsible for reviewing all pre-procedure test results (COVID-19 included), as well as communicating actionable follow-up to patients (ex. re-scheduling, quarantining, etc.).
