

Pediatric Standard Isolation Mask Guidelines

5.6.21 1200

Spectrum Health contact: Jessica McClusky *Highlight denotes new content

Document reviewed: 5.6.21

Use the following guidelines for providing a pediatric patient with a standard isolation mask:

- Under the age of 2: No requirements or recommendations.
- 2-4 years old: Request that the child wear their home mask or provide hospital mask.
- 5 years old and above: Provide hospital mask for entry.
- The mask must be well-fitting, without gaps, worn covering the mouth and nose, and secured as intended by the manufacturer's instructions for use.
- Pediatric sized masks may be ordered through Workday ITM-1091935.
- See [Pediatric Masking Guide](#) for FAQs (available on Spectrum Health's internal site).

Pediatric masking exceptions:

- Children who do not tolerate wearing a mask for medical or other reasons

When pediatric size isolation masks are not available, a standard isolation mask may be modified for a pediatric patient using one of the methods below:

- **Utilize an ear saver:**

- **Tie the mask ear loops:**
