Consult and Referral Guidelines

HDVCH has developed these consult and referral guidelines as a general reference tool to assist referring physicians with the specialty referral process. Pediatric medical needs are complex and these guidelines may not apply in every case. HDVCH relies on its referring providers to exercise their own professional medical judgment with regard to the appropriate treatment and management of their patients. Referring providers are solely responsible for confirming the accuracy, timeliness, completeness, appropriateness and helpfulness of this material and making all medical, diagnostic or prescription decisions.

| Diagnosis/Symptom | Suggested Workup/Initial Management | When to Refer | Additional Information Needed |
|---|---|---|--|
| Cognitive Impairment/ Developmental Delay/Autism | Consider referring to Early On (<3 years old) Consider having the patient evaluated to determine extent of delays/impairment. | Diagnosis of cognitive impairment. Persistent unexplained developmental delays. Family history of developmental delay/cognitive impairment. | Medical records including: <ul style="list-style-type: none"> • Work up from other pediatric specialists (if done) • Most recent primary care visit record • Growth charts • Genetic laboratory studies reports (if done) • Imaging reports (if done) |
| Hypotonia/Hypertonia | Consider referring to neurology | Unexplained persistent hypertonia or hypotonia. | Medical records including: <ul style="list-style-type: none"> • Work up from other pediatric specialists (if done) • Most recent primary care visit record • Growth charts • Genetic laboratory studies (if done) • Imaging reports (if done) |
| Major or minor physical anomalies or birth defects | Refer to appropriate system specialist. E.g.; cardiology, ophthalmology, plastic surgery, nephrology, ENT, etc. | Presence of any major anomaly or birth defect. If there is a pattern of anomalies that appears syndromic. For multiple minor anomalies Associated with cognitive impairment or developmental delay. Family history of similar anomalies. | Medical records including: <ul style="list-style-type: none"> • Work up from other pediatric specialists (if done) • Most recent primary care visit record • Growth charts • Genetic laboratory studies (if done) • Imaging reports (if done) |
