

ADA screening recommendations for T2DM childhood:

Overweight BMI >85th percentile for age and sex and >10 years of age or onset of puberty if puberty occurs at younger age plus any two of the following risk factors:

- Family history of T2DM in first or second degree relatives
- race/ethnicity (Native American, African-American, Latino, Asian-American, Pacific Islander.
- Signs of insulin resistance or conditions associated with insulin resistance (acanthosis nigricans, hypertension, dyslipidemia, or polycystic ovarian syndrome)

Please note these are screening recommendations for asymptomatic T2DM. Any child who presents with symptoms of diabetes (e.g. polyuria, polydipsia, weight loss) should be tested immediately.

*Note the absence of measured insulin levels in the evaluation of diabetes
